

C-P Flexible Packaging

SEO Progress Report

Reporting Period: June 24 – July 28, 2026

Prepared by Start Advertising | Scope: Pre-launch on-page SEO & structured data (new HubSpot site)

Executive Summary

This period, Start Advertising completed a full on-page SEO and structured-data build across all 59 pages of the new C-P Flexible Packaging website in HubSpot. Every page now carries a rewritten title tag, a new meta description, descriptive image alt text, and, where applicable, JSON-LD structured data (schema) — 100% of the page set.

Important context: this new site is built in a HubSpot instance that is not yet live. There is therefore no organic ranking or traffic data to report this period — the work is the site's pre-launch SEO foundation, ensuring it goes live search-ready rather than needing months of optimization after the fact. The company's current live site (garlockflexibles.com) has none of this structure in place today.

Dashboard Snapshot — as of July 28, 2026

59 Pages Optimized	100% Page-Set Coverage	160+ Content Images Alt-Textured	51 Structured-Data Blocks
------------------------------	----------------------------------	--	-------------------------------------

The new site is not yet live, so there is no organic ranking or traffic data this period. Performance measurement — Google Search Console, Analytics, and rank tracking — begins once the site launches.

Work Completed This Period

The following on-page SEO and structured-data work was completed across the new C-P Flexible Packaging site:

- **Page Titles (Title Tags) — 59 rewritten: keyword-front-loaded and kept within the ~70-character limit for clean display in search results.**
- Meta Descriptions — 59 written: benefit-driven with clear calls to action, within ~155 characters, to lift click-through once live.
- Image Alt Text — 160+ content images given descriptive, keyword-aligned alt text (replacing empty or filename-style tags), improving accessibility and image-search visibility.
- Structured Data (Schema) — 51 JSON-LD blocks added (Service and CollectionPage types), helping Google understand each page and enabling eligibility for rich results.
- Sitewide Fixes — footer certification badges (SQF, AIB, BRCGS) and global elements (logo, GreenStream block, icons) given correct, consistent alt text across the whole site in a single pass.

Current Live Site vs. New Build

For context, here is how the company's current live site (garlockflexibles.com) compares to the new, optimized site we have prepared for launch. The new build closes the gaps that leave the current site under-optimized for search.

SEO Element	Current live site (garlockflexibles.com)	New C-P site (built, pre-launch)
Page titles	Basic / not optimized	59 rewritten, keyword-focused
Meta descriptions	Missing or weak	59 written with CTAs
Image alt text	Largely missing	160+ images alt-texted
Structured data (schema)	None detected	51 JSON-LD blocks
H1 headings	Multiple / unclear H1s	Single descriptive H1 per page

Baseline from a review of garlockflexibles.com on July 28, 2026. The new site launches with structured data and full on-page optimization the current site lacks entirely.

Pages Optimized by Category

Category	Pages
Product pages (bags, pouches, rollstock, lidding, sleeves, labels, etc.)	37
Market pages (coffee, confectionery, cookie & bakery, medical, aerospace, pet food, snack, health)	9
Capability pages (design, prepress, HD flexographic, finishing)	4
Sustainability pages (Sustainable hub, GreenStream, recycling, solar)	4
Corporate / utility pages (Our Companies, Technology, Privacy, Consultation)	4
Resource / landing pages (Cold-Seal Guide)	1
Total optimized	59

What's Next

The on-page SEO build is complete. The following are queued for the coming period and for launch:

- **Pre-launch measurement setup — connect Google Search Console and Google Analytics and stand up rank tracking, so performance can be measured the moment the site goes live.**
- Content expansion with targeted keyword research and new product pages to broaden topical coverage and capture more search demand.
- Additional structured data — FAQ (FAQPage) schema on high-intent product pages and a sitewide Organization schema on the homepage to reinforce brand-entity and E-E-A-T signals.

Findings & Recommendations

On-Page (quick fixes)

- **Fix five generic H1 headings — the HD Flexographic Printing, Technology, Products, Package Finishing, and Request a Consultation pages use vague or sitewide H1s. Changing them to their descriptive titles is a fast, high-value gain.**
- Cross-link the three near-duplicate page pairs — matte/gloss, paper, and recyclable (each has a rollstock and a pouches version) — so they support rather than compete with each other.

Launch Readiness

- **Prepare a launch-day SEO checklist — 301 redirects from garlockflexibles.com URLs, XML sitemap, robots directives, and Search Console verification — so existing search equity transfers cleanly at go-live.**
- Run an internal-linking pass connecting hub pages to their sub-pages (Markets → market pages, Products → categories, Bags → bag types).

Strategic

- **Layer FAQ sections + FAQPage schema onto top product pages to compete for featured snippets and AI answers.**

- Establish a monthly reporting cadence post-launch so rankings, impressions, clicks, and conversions are tracked on a consistent timeline.
