

SEO AUDIT REPORT

Lavender Healing Collective

Prepared by: Parts of Practice

Audit Date: May 26, 2026

CONFIDENTIAL

1. Overall SEO Health Score: 36 / 100

SCORE: 36/100 | Ubersuggest On-Page: 76/100 | Organic Traffic: 22/month | Ranking Keywords: 28

Lavender Healing Collective has a mission-driven niche, genuine clinical expertise, and has already earned high-authority links from top universities - but the site is essentially invisible in search. With only 22 organic visitors per month and 28 ranking keywords across 26 crawled pages, the site is failing to connect its services with the LGBTQIA+ BIPoC clients and organisations who need them. Critical issues include 17 of 26 pages missing H1 headings, an 8.52-second mobile load time, zero schema markup, and no individual therapist credentials documented anywhere on the site.

Note: Ubersuggest scores 76/100 for technical on-page checks only. The 36/100 score above reflects real-world visibility, content depth, mobile performance, conversion readiness, and E-E-A-T signals.

2. Top 5 Priorities

No.	Priority	Impact	Effort
1	Add H1 headings - 17 of 26 pages are missing them	Critical	Low
2	Fix mobile page speed - 8.52 seconds rated POOR	High	Medium
3	Resolve duplicate title tags and meta descriptions	High	Low
4	Unblock 1 page from search engine indexing	High	Low
5	Build out therapist credential bios for all 7 clinicians	High	Medium

3. Quick Wins (Under 1 Week)

- Add H1 headings to all 17 pages missing them - in Squarespace, open each page and set the first heading block to Heading 1. Takes 1-2 minutes per page.
- Rewrite H1s on the three main service pages - current headings are single words with no keyword value: /therapy -> Trauma-Informed Therapy for LGBTQIA+ BIPOC in California | /training -> Trauma-Informed and DEI Trainings for Organizations | /consultation -> EMDR Consultation and Clinical Supervision for Therapists
- Fix 2 duplicate title tags - each page must have a unique title targeting a specific keyword (see recommended copy below).
- Fix 2 duplicate meta descriptions - write unique descriptions for all affected pages.
- Identify and unblock the 1 page blocked from search engines - go to Squarespace page Settings and confirm indexing is enabled.
- Replace the Gmail contact address with a branded email - set up hello@lavenderhealingcollective.com via Google Workspace through Squarespace.

4. Medium-Term Recommendations (2-8 Weeks)

- Build full therapist bios for all 7 clinicians. Add license type and number, specialisations and modalities, populations served, educational background, and languages. This is the single most impactful E-E-A-T improvement available to the site.
- Add unique meta descriptions to all key pages. Currently missing on most service pages - direct impact on rankings and click-through rate.
- Add Organisation and MedicalBusiness schema to the homepage. Helps Google understand the practice type, services, and location. Does not change what visitors see.
- Add FAQPage schema to /faq. Makes the site eligible for rich results in Google - FAQ answers appear directly in search results without needing a higher ranking.
- Add city-level location references throughout the site. Currently only California is mentioned. Adding Los Angeles, the Bay Area, San Diego, and Sacramento helps the site appear in city-specific searches.
- Strengthen calls-to-action on every service page. Replace the passive Contact us with Book Your Free 15-Minute Consult linked to a booking tool such as SimplePractice or Calendly.
- Expand thin content on 3 flagged pages to at least 400-600 words of original, keyword-relevant copy.

5. Long-Term / Strategic Recommendations

- Launch a blog and content strategy. The site currently ranks for 28 keywords and receives 22 organic visits per month. Publishing 2 posts per month targeting the right keywords is the most effective long-term growth strategy.
- Create dedicated landing pages for EMDR Consultation and Supervision. Currently buried within the Consultation page - each deserves its own URL and keyword targeting.
- Replicate the university backlink strategy. Harvey Mudd College (DA 73) and Claremont McKenna College (DA 57-61) are already linking to this site as a Title IX and emotional wellness resource. Identify 15-20 similar university wellness and diversity pages in California and submit for inclusion.
- Build Psychology Today and therapy directory profiles for all 7 therapists on Psychology Today, Therapy Den (already linking), Inclusive Therapists, and Melanin and Mental Health. Each profile is a citation and a potential high-quality backlink.
- Develop the Training page into a full lead generation hub. 12 training topics are listed with minimal copy and no pricing. Each needs a 150-200 word description, target audience, format, duration, and a CTA.
- Set up Google Search Console and Google Analytics. No data visibility currently - essential for tracking progress and informing future decisions.

6. Technical SEO Analysis

Element	Status	Notes
Title Tags	Issues - 2 duplicate, 1 too short	All pages have titles (Squarespace default) but none are keyword-optimised
Meta Descriptions	Issues - 2 missing, 2 duplicate	Google writing its own descriptions on most pages
H1 Tags	Critical - missing on 17 of 26 pages	Most significant on-page issue on the site
Heading Structure	Issues - H4 used on FAQ page	H4 used for questions instead of H2 or H3
Schema / Structured Data	None	No Organisation, MedicalBusiness, FAQPage, or Person schema anywhere
XML Sitemap	Present - no issues	Sitemap.xml valid and accessible
SSL Certificate	Valid - no issues	HTTPS clean across all pages
Desktop Page Speed	2.97s - Needs Improvement	Below ideal threshold of 2.5s
Mobile Page Speed	8.52s - POOR	3x above threshold - major ranking suppression on mobile
Mobile Interactivity	3,879ms - POOR	Should be under 200ms - poor user experience
Visual Stability (CLS)	0.12 - Needs Improvement	Ideal is 0.1 or lower
Broken Links	None	Passes Ubersuggest check
Blocked Pages	1 page blocked	Needs investigation - likely unintentional
URL Structure	2 poorly formatted URLs	Check for underscores, capitals, or unnecessary parameters

7. On-Page SEO and Content Analysis

Homepage

Status: Present but keyword-weak. The homepage loads fully with a hero statement, therapist profiles, and service sections. However, it has no location-specific keywords, no client testimonials, and no schema markup. The meta description is the only page with one present - all others are missing theirs entirely.

/therapy

Status: Thin content with generic headings. The H1 reads simply Therapy - one of the most generic possible headings. The page has strong values-driven copy but almost no service-specific keywords, modality names, or condition terms that people actually search for. The CTA links to a contact form only with no direct booking option.

/training

Status: 12 training topics listed with almost no descriptive copy. Each topic gets minimal text, no pricing, no outcomes, and no testimonials. This is a high-commercial-intent page being massively underutilised. The H1 reads Training - a missed keyword opportunity. No meta description.

/consultation

Status: Strong credential buried in weak structure. Roshni Chabra's EMDRIA Approved Consultant credential is the strongest trust signal on the entire site - but it appears once, in paragraph text, with no schema markup and no prominent display. H1 reads Consultation. No meta description. CTA directs to Gmail.

/about-us

Status: Good mission voice, weak credential documentation. The page has a strong founder note and clear values. However, there are zero license numbers, no educational backgrounds, and no professional affiliations listed for any of the 7 clinicians. This is a major E-E-A-T gap on a YMYL site.

/faq

Status: Useful content, no schema. Six solid FAQ questions are present but the page uses H4 tags for question headings instead of H2 or H3, there is no FAQPage schema markup, and there is no introductory paragraph. Without schema, the page is ineligible for Google's rich results feature.

Content Quality Summary

Metric	Assessment
Word count	Thin - 3 pages formally flagged by Ubersuggest as low word count
Keyword targeting	Absent - values-led copy dominates; condition, modality, and location keywords largely missing
Internal linking	Weak - navigation-only; no contextual cross-links between service pages
CTAs	Passive and generic - no urgency, no direct booking path anywhere on the site

8. E-E-A-T Analysis

Google evaluates therapy and mental health sites under its strictest standards - Your Money or Your Life (YMYL) content. E-E-A-T (Experience, Expertise, Authoritativeness, Trustworthiness) signals are essential for ranking. Lavender Healing Collective has genuine clinical expertise and lived experience - the gap is documentation.

Signals Present

- 7 licensed therapists named on both the About and Therapy pages
- Roshni Chabra identified as an EMDRIA Approved Consultant on the Consultation page
- Strong mission and values documentation - intersectional feminist, anti-oppressive framework clearly articulated
- High-authority external links from Harvey Mudd College (DA 73) and Claremont McKenna College (DA 57-61)
- Media feature on Metro Silicon Valley (DA 56) naming Tiombe Wallace

Critical E-E-A-T Gaps

- No license numbers displayed anywhere on the site. LMFT and AMFT license numbers for all 7 clinicians should be visible on therapist bio pages and the About page.
- No individual therapist bios with credentials. Names are listed but no education, specialisations, modalities, populations served, or professional training is documented.
- EMDRIA credential appears only once. Should be prominently displayed on the homepage, About page, and Consultation page - not buried in a paragraph.
- No client testimonials anywhere on the site. For a therapy collective, anonymised client quotes are powerful trust signals. Add to the Therapy page and homepage.
- No professional affiliations listed. Membership in CAMFT, NASW, APA, or EMDR-IA should be displayed site-wide.
- Media coverage not leveraged. The Metro Silicon Valley feature should be surfaced as a Featured In signal on the homepage.

9. Conversion and User Experience Issues

- Homepage CTA: Weak. The homepage has a Contact us for a free consultation link but no direct booking path, no embedded scheduler, and no urgency language.
- Gmail contact address: Using LavenderHealingCollective@gmail.com for all inquiries reduces perceived professionalism. Every service page and the contact page should use a branded email address.
- Mobile load time of 8.52 seconds will cause significant visitor abandonment before the page even loads. This directly suppresses organic rankings.
- Trust signals above the fold: None. The homepage hero has no credentials, no reviews, and no social proof visible before scrolling.
- Navigation overload: 14+ items in the navigation create decision fatigue. The 3 core revenue services - Therapy, Training, Consultation - should be the dominant navigation priorities.

10. Content and Keyword Strategy

Primary Audience: LGBTQIA+ BIPOC individuals and couples in California seeking trauma-informed, identity-affirming therapy via telehealth.

Secondary Audience: Licensed clinicians (MFTs, LCSWs, Psychologists) seeking EMDR consultation, supervision, or professional training.

Tertiary Audience: Organisations, agencies, and educational institutions seeking DEI and trauma-informed training programs.

Keyword	Intent	Est. Difficulty	Priority Page
LGBTQIA+ therapist California	Commercial	Medium	/therapy
BIPOC therapist telehealth	Commercial	Low	/therapy
Trauma-informed therapy California	Commercial	Medium	/therapy
Therapy for Black women California	Commercial	Low	/therapy
EMDR therapist California	Commercial	Medium	/consultation
EMDR consultation EMDRIA approved	Commercial	Low	/consultation
EMDR supervision California	Commercial	Low	/consultation
Trauma-informed training for organisations	Commercial	Medium	/training
DEI mental health training	Commercial	Medium	/training
Sliding scale therapy California	Informational	Low	/therapy or /faq

Top Content Gap Opportunities

- No blog or content section. The site cannot rank for informational queries at all - and these are the queries that drive awareness and first contact from new potential clients and training participants.
- No condition-specific pages. There are no pages targeting PTSD, anxiety, depression, racial trauma, or relationship issues - all high-volume search terms directly relevant to the practice.
- No dedicated supervision page. Clinical supervision for associates is buried in the Consultation page. It deserves its own URL and keyword strategy.
- No city-specific landing pages. The site covers all of California via telehealth but mentions no cities - a missed opportunity for geo-targeted searches from Los Angeles, Bay Area, and San Diego.

11. Action Plan

Week 1 - Quick Wins

1. Add H1 headings to all 17 pages missing them
2. Rewrite H1s on /therapy, /training, and /consultation
3. Fix 2 duplicate title tags and 2 duplicate meta descriptions
4. Identify and unblock the 1 page blocked from search engines
5. Compress and resize all site images using Squoosh or TinyPNG
6. Replace Gmail address with branded email via Google Workspace

Weeks 2-3 - Metadata and Credentials

7. Write unique meta descriptions for all key pages
8. Begin writing therapist bio pages with full credentials for all 7 clinicians
9. Fix the 2 pages with poorly formatted URLs
10. Set up Google Search Console and submit sitemap

Weeks 4-6 - Schema and Content

11. Add Organisation schema markup to the homepage
12. Add FAQ Page schema markup to /faq

13. Expand the 3 thin-content pages to 400+ words each
14. Add a booking widget to /therapy and /contact-us
15. Add city-level location language to /therapy and the homepage

Month 2 and Beyond

16. Launch blog with first 2 posts targeting primary keywords
17. Create or complete Psychology Today profiles for all 7 therapists
18. Begin university outreach campaign targeting Title IX and wellness resource pages
19. Submit to 5 therapy and LGBTQ+ directories per month
20. Track keyword rankings and organic traffic monthly against the baseline of 28 keywords and 22 visits
